

## Our **Expertise:**

We are fanatic in our approach towards developing technical leadership. In the Healthcare industry, we have been doing it for the last 10+ years now. Our understanding of Healthcare workflows & systems arises from our hands-on experience of having successfully executed numerous projects till date. From boutique practices, hospitals, clinics to specialty centers, we have developed software solutions which stand out for the precision of their customization. The results have shown visible improvement in the healthcare setups in terms of enhancing the efficiency of their operations and the quality of outcome & care.

Our healthcare specialists are technical enthusiasts with expertise across multiple software platforms and architectures. What differentiates them, when they develop Healthcare IT solutions, is their ability to complement their technical strength with a strong understanding of regulatory compliances (e.g. **MU**, HIPAA, CCHIT) and healthcare standards (e.g. **HL7**, **ICD-10**, XDS/XDS-I). We understand the nuances involved in overcoming the challenges that come in the path of implementing software solutions in healthcare setups.

## Systems:
