

Multi Site Setup for selling courses online

WordPress Solution

Executive Summary:

WordPress as a content management system is popular in a variety of sectors, Education being one of them. One of our clients from the USA who is a premier Education Services provider approached us to come up with a solution for a MultiSite setup using WordPress for selling courses online. Some of the finer requirements that the client asked us to implement are as follows:

- ✓ Create Multiple WordPress sites for the various courses that he had on offer.
- ✓ Each WP site can have a separate template or theme and would be controlled by individual admins.
- ✓ The admins would have the authority to create their own Post/Pages etc which would be reflected only in that particular WP site and not in the other WP sites.
- ✓ The master control would be in the hands of a super admin controlling the main WP site with which all other WP site would share their code bases.

Mindfire Solutions responded proactively to the above requirements and did a commendable job for the client. The client was extremely pleased with the services offered by Mindfire as well as the developer carrying out the job. The client also expressed their desire to employ the services of the same developer again for another fresh project.
