

Custom Record Consolidated With Customer Center

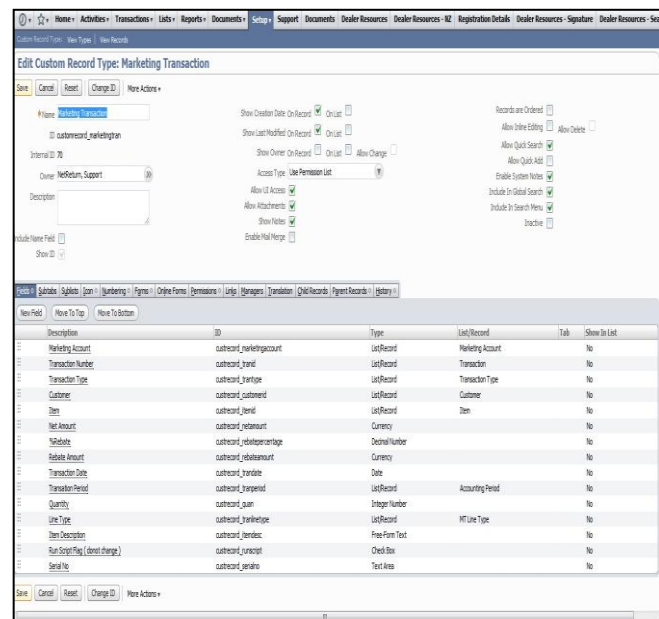

- A NetSuite Solution

Executive Summary:

A successful business system solutions provider from Australia which focused on providing solutions to small and medium businesses employed the NetSuite Development expertise of Mindfire Solutions for providing a solution towards consolidating custom records with the customer center.

The task required our NetSuite development team to implement content customization for their 'Customer Center' screen in NetSuite. Our client's primary requirement was to setup a comprehensive system for managing customers. This system should help our client achieve the following goals:

1. Help their customers to perform a detailed business flow of the various transactions with their company
2. Keep track of all the aforementioned business deals in their NetSuite account

Mindfire Solutions backed by its 5+ years of hands-on NetSuite development experience immediately set about the task. In order to make the whole custom development work simpler the project was divided into phases.
