

OSI Days 2010, Chennai: ASIA'S LARGEST OPEN SOURCE CONFERENCE!

Summary of Experience, By Jyotirmaya Dehury

I was very much excited when I got the email from our HR Manager, Mainak Mitra about OSI Conference inviting nominations for attending OSI Days. This was my first conference so the excitement was much bigger. I along with five of my colleagues were selected to attend this conference. The 3-days conference was at Chennai.

So six of us from Mindfire started our journey from Bhubaneswar to Chennai. All the travel arrangements were done by Mindfire.

OSI Days 2010 : The Event

We started our OSI days with a quick registration process and Opening Ceremony and Keynote address. Then our much awaited open source sessions get started and continued for the next two days. The speakers in the conference were from Facebook, Google, Microsoft, Yahoo, Zend, php.net, INGRES etc. All the sessions were pretty good and highly knowledgeable. But the sessions I liked the most are "Hadoop, HBase, and Hive at Facebook by Jonathan Gray", "The most unknown parts of PHPUnit by Bastian Feder", "Building & Scaling Facebook with Open Source by David Recordon" and "MySQL Performance Tuning: Top 10 Tip by Sonali Minocha".

Besides the sessions we got some wonderful opportunity to interact with the speakers and discussed on our queries.

Message to Future Mindfireans:

Thanks to Mindfire for providing us such an opportunity.

I have been associated with Mindfire since more than five years. Mindfire always provides the best learning opportunities, and if you are passionate to learn and committed to work then Mindfire is the right place for you.
