

Microsoft Dynamics RMS

SmartShopping Application

SmartShopping Application is a general standalone application, integrated as RMS addin. For frontend UI, WinForm is used and for backend, SQL server DB. The add-in is used at RMS Store Operations end. The add-in is used for items searching, selection, and purchase.

Features & Functionality :-

- Custom POS Button AddIn
- Listing Available Items
- Displaying Categorized Items
- Featuring Search Items
- Detailed Description on POP up balloons
- On Selection
 - Quantity Needed
 - Tender

Basic Application Flow :-

- Application Installation
 - DB Settings
 - A Custom POS Button will get added
- At RMS POS End - On Custom POS Button Click
 - WinForm Launch
 - Listing Items as Buttons – Department category
 - Click – Dynamic Buttons to Get Other Inner categories Items details
 - Select a Particular Item – Go for Purchase using Tender

UI Customization :-

- Renaming Department, Category and Items
- Adding images to Items
