

Quality Assurance & Testing Services

expertise:

- Mercury tools
WinRunner, LoadRunner
- Segue tools
SilkTest, SilkExpress,
SilkPerformer
- Platforms
Windows, Mac, Linux
Palm, PocketPC
XBox, PlayStation

team:

- Certified QA engineers
- World-class experience
- Direct interaction with gurus in the field
- Publication of articles in global QA communities like www.stickyminds.com

Mindfire Solutions has a well-developed QA team, with supporting infrastructure and processes. QA Engineers have wide industry experience, and many are developers who have moved to QA/testing roles.

services

- Black-box testing
- **Automated** testing
- Exploratory testing
- Usability testing
- **Regression** testing
- Stress testing
- Configuration testing
- Integrity testing
- Conformance testing
- Web Site Load testing
- Security testing
- Installation testing

infrastructure

A Central QA-Lab provides multiple machines in different configurations, for effective real-life testing. This includes Windows, Mac, Linux, Palm, PocketPC, XBox and PlayStation machines (all OS versions and Service Packs).

Mindfire's Bug Tracking System was developed keeping remote development and testing in view. It is a highly focussed, practical and usable system leading to real benefits.

scenarios

Scenario	What we need	What we do	What we deliver
1. Complete QA	Project Documents Testable software	Build Test Plan Design Test Cases Test Execution Bug Reporting Retest fixed bugs Test Management Certification	Test Document Test Matrix Bug Report Known-bug list
2. You manage, we execute	Project Documents Testable software Test Plan Test Cases	Test Execution Bug Reporting Retest fixed bugs	Test Matrix Bug Report
3. Part of your testing team	The division of test activities depends on the client's decision e.g. while client's test team manages automated testing; we do the manual functional testing. Or the client's team handles new bugs and we re-test and close the fixed ones.
